1. The cart contents are stored in the browser's local storage.
2. The cart page uses the HomeLayout layout, meaning the navigation menu is not displayed.
3. A cart icon is displayed in the top bar of the HomeLayout, allowing users to navigate to the Cart page.
4. Implement current user view and logout in Homelayout's topbar
5. The **Continue Shopping** button navigates the user back to the Home page.
6. Products are displayed in a grid. Clicking the - or + button updates the cart contents, and the checkout summary (**Subtotal**, **Tax**, and **Total**) is recalculated automatically.
7. Clicking the **Remove** button also updates the cart and the checkout summary accordingly.
8. Clicking the **Checkout** button clears the cart.

Extras:

1. The Cart page is only accessible to authenticated users.
2. A badge is displayed on the cart icon showing the number of distinct items currently in the cart. The badge updates automatically whenever the cart contents change.

3. **User-based cart:** The cart contents stored in local storage are associated with the currently authenticated user, ensuring each signed-in user has their own separate cart.
